Overview

With the 12.0 update to BarTender Cloud, Seagull Software continues to enhance your design and printing experience, and to provide easier ways to manage and administer your print operations. This What's New document describes the most significant features that were added or improved in this update.

BarTender Cloud 12.0

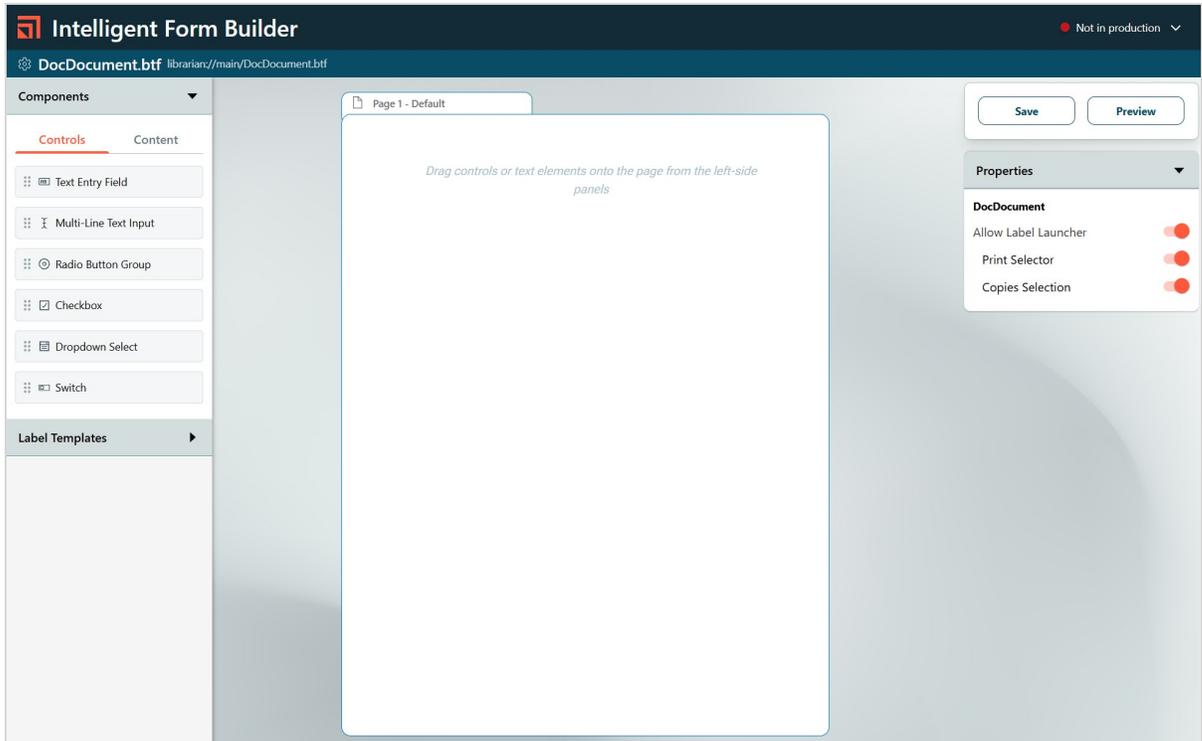

- [Intelligent Forms Integration](#)
- [Linked Printers Now Coordinated with Subscription Tiers](#)
- [Automate Print Workflows with BarTender File Drop](#)
- [Enterprise Tier](#)

Intelligent Forms Integration

BarTender Cloud now enables Automation and Enterprise users to access the new Intelligent Forms Builder from the Librarian environment. The new forms enable you to build a simple form with basic functionality using predefined fields that can be manipulated at print time. A single form can be reused across multiple labels and printers.

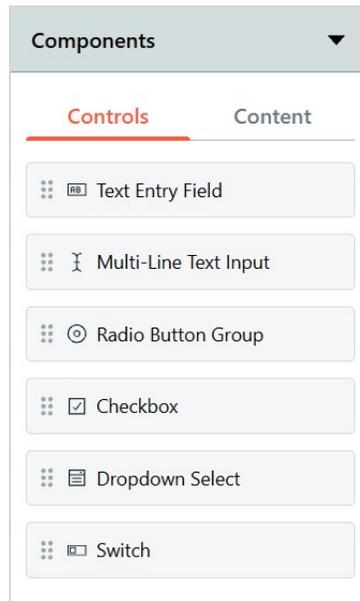

The Intelligent Forms Builder

- To open the Intelligent Forms Builder, in Librarian click **New** and choose **Intelligent Form**.

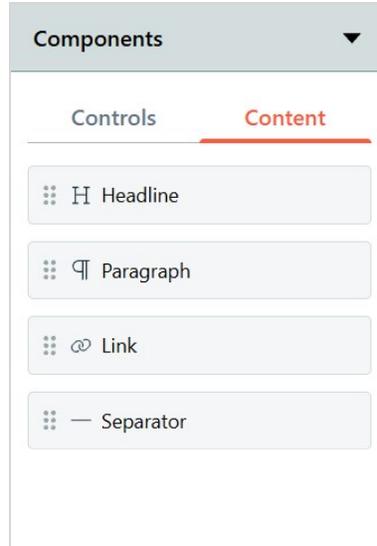

From the Components section, drag controls and content onto the form, then use Properties section to specify how the control or content items appear and behave.

Controls enable the user to enter data at print time. Drag individual controls from the Controls tab onto the label to position them.

Content components enable the user to control how the form will appear at print time, whether it includes any explanatory text, and whether any external links are included. Drag individual components from the Content tab onto the label to position them.

Attributes properties control the naming and default values of the component, including the size of a component's fields, and whether the component is visible, enabled, or required. Layout and Style properties control the size and alignment of the component. Options properties enable the user to add more options to a component and control their default settings.

Working with Intelligent Forms

One of the advantages of working with Intelligent Forms is that a single form can be connected to multiple labels.

 - test for revisions.btw August 18, 2022

Cancel Link Files

In Librarian, labels can be printed either by selecting the label file (*.btw) or the form file (*.btf). Using the form file, the user can print any label attached to it.

Printer: PDF

Copies: 1

Label:

- Dual Barcode Label.btw
- Amazon Palet Label Test.btw**
- Dual Barcode Label.btw
- RFID Asset.btw

The Intelligent Forms files (*.btf) do not appear in Print Console, so when print operators select a label file in Print Console that is attached to an Intelligent Form (or has both a classic Designer form and an Intelligent Form attached), the Intelligent for will always display when the label is printed.

Licenses page

When BarTender Cloud is linked to BarTender using the Hybrid Cloud, a new page appears under the Settings item on the Administration menu. This licensing page contains information about the licenses that are linked with BarTender, enabling the Hybrid Cloud.

Licenses

View BarTender license details and monitor the status to ensure access to BarTender Cloud.

Linked Printers Now Coordinated with Subscription Tiers

The ability to use the Linked Printers feature is now tied to the BarTender Cloud licensing tiers. Access to the Linked Printers feature is now dependent on the user's subscription tier.

- The Essentials tier does not include the Linked Printers feature.
- The Automation and Enterprise tiers include this feature.

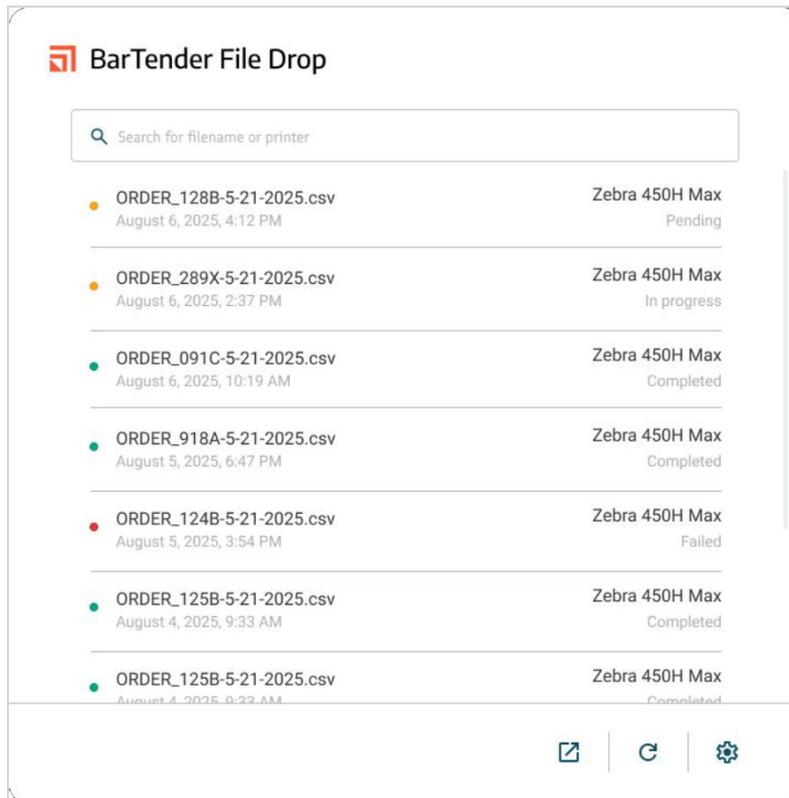

In the previous version, Linked Printers had to be activated by Seagull Support.

For more detailed information, refer to [Adding a Linked Printer](#) in the BarTender Cloud help.

Automate Print Workflows with BarTender File Drop

The BarTender File Drop tool enables a user to automate printing by dropping the files to be printed into a folder on their local computer. The tool scans the folder, picks up the file, and sends it to the specified printer. This file-based integration option is for those who cannot connect to BarTender Cloud via the REST API.

After installing the tool, you define the authentication credentials, printing rules, preferences, and how the application handles files. With that finished, you simply drop a file into the designated folder and the BarTender File Drop tool automatically prints it according to the defined rules and file handling. You can monitor the status of the print jobs on the tool's main page. Finished

The screenshot displays the BarTender File Drop web interface. At the top left is the BarTender logo and the title 'BarTender File Drop'. Below the title is a search bar with the placeholder text 'Search for filename or printer'. The main area contains a list of print jobs, each with a colored status indicator (yellow for pending, orange for in progress, green for completed, red for failed), the filename, the date and time, the printer name, and the current status. At the bottom right, there are three icons: a square with a diagonal line, a circular arrow, and a gear.

Status	Filename	Date/Time	Printer	Status
Pending	ORDER_128B-5-21-2025.csv	August 6, 2025, 4:12 PM	Zebra 450H Max	Pending
In progress	ORDER_289X-5-21-2025.csv	August 6, 2025, 2:37 PM	Zebra 450H Max	In progress
Completed	ORDER_091C-5-21-2025.csv	August 6, 2025, 10:19 AM	Zebra 450H Max	Completed
Completed	ORDER_918A-5-21-2025.csv	August 5, 2025, 6:47 PM	Zebra 450H Max	Completed
Failed	ORDER_124B-5-21-2025.csv	August 5, 2025, 3:54 PM	Zebra 450H Max	Failed
Completed	ORDER_125B-5-21-2025.csv	August 4, 2025, 9:33 AM	Zebra 450H Max	Completed
Completed	ORDER_125B-5-21-2025.csv	August 4, 2025, 9:22 AM	Zebra 450H Max	Completed

Enterprise Tier

Seagull Software now includes an Enterprise tier for BarTender Cloud customers. Enterprise tier customers receive a pre-built print connector and access to features that aren't available at other tier levels.

The Enterprise tier is ideal for large businesses in highly regulated industries that require tight control over change management and data residency, and that are integrated with cloud-based ERP systems, such as SAP, Workday, or BarTender Print Connector for Dynamics 365 Business Central.
