What's New

BarTender Track & Trace – Release 12.0

February 2026

Contents

Overview

With the 12.0 update to Track & Trace, Seagull Software continues to enhance experience, and to provide easier ways to manage and administer your operations. This What's New document describes the most significant features that were added or improved in this update.

BarTender Track & Trace 12.0 release notes are available on the online BarTender Support Center.

The new or improved features available in BarTender Track 7 Trace are:

- Fast Receive: Multi-Select Master Order Filtering

- Business Metrics – Inventory API v3.2: Enhanced Datetime Range Filtering

- Track & Trace Homepage: Picklist KPI, Global Search, and Autocompletion

- Tenant Management: Tenant Deletion Endpoint

## Fast Receive: Multi-Select Master Order Filtering

Fast Receive now supports selecting multiple Master Orders within the receiving interface. This enhancement improves efficiency in high-volume receiving scenarios and helps reduce the risk of incorrect or partial receives when processing complex inbound shipments.

Business Metrics – Inventory API v3.2: Enhanced Datetime Range Filtering

The Inventory Reads API has been updated to support ISO 8601–based datetime filtering using the cycleCountDateTime dimension, along with improved mates logic handling. Documentation has been updated to clarify supported parameters and usage patterns for more precise inventory analysis.

Track & Trace Homepage Enhancements: Picklist KPIs, Global Search, and Autocompletion

Seagull is excited to announce the release of the Track & Trace homepage, designed to provide an intuitive and informative landing experience upon login. The homepage serves as the central entry point to the console, offering immediate visibility into site activity, asset movements, and inventory status. This release builds on and complements previous homepage enhancements, reinforcing the homepage as the primary operational reference for asset management and site oversight.

The Track & Trace homepage has been enhanced with improved search, clearer lifecycle handling, refined data presentation, and visual updates, strengthening its role as the primary operational landing page.

Tenant Management: Tenant Deletion Endpoint

A new internal tenant deletion capability has been introduced to automate the full tenant lifecycle removal process, including backup, cleanup, and validation steps. This enhancement reduces execution time and removes manual operational dependencies for platform administration.
