Overview

With the 11.6 update to BarTender Cloud, Seagull Software continues to enhance your design and printing experience, and to provide easier ways to manage and administer your print operations. This What's New document describes the most significant features that were added or improved in this update.

BarTender Cloud 11.6 release notes are available on the online [BarTender Support Center](#).

The new or improved features available in BarTender Cloud are:

- [BarTender Cloud Home Page Updated](#)

Describes improvements made to the BarTender Cloud Home page to enhance workflows and the user experience.

- [Enhanced RFID Field Visibility](#)

Describes how templates and fields that use RFID are now clearly marked in the Template Assistant.

- [Enhanced Error Reporting](#)

Describes changes to the error messages displayed when multiple records are printed via the DataBaseOverride method.

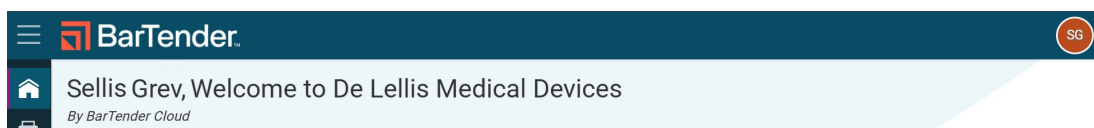

- [Print Engine Modified](#)

Describes the upgrades to the BarTender Print Engine.

BarTender Cloud Home Page Updated

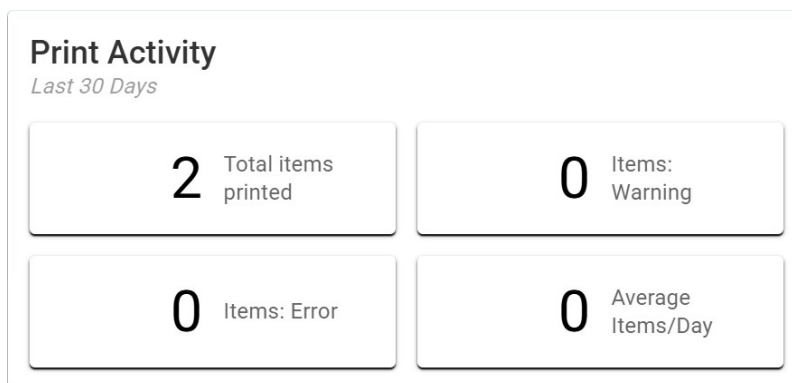

The BarTender Cloud Home Page has been updated to include two new sections designed to increase workflow efficiency for the user: *Recent Files*, which displays the six most recent files the user has worked with; and *Recently Printed*, which displays the last files printed by the user.

In addition, the *Print Activity* panel has been moved to the top of the page, beside the *Quick Access* panel, and the page heading has been upgraded to include specific user and company information.

Print Activity

The Print Activity section has moved to the top, left-hand side of the Home page. The information in this panel hasn't changed: it still displays your printing information for the previous 30 days, including the total number of items printed, the number of warnings and errors encountered, and the average number of items printed per day.

If nothing has been printed in the past 30 days, or if a user does not have permissions to print, this panel is not displayed and the Quick Access panel fills the entire top of the page.

Recently Printed

The Recently Printed section of the Home page displays a list of the seven most recently printed jobs, including the name of the document that was printed, the printer used, and the status of the print job.

Recently Printed				See All
RFID Asset.btw 7/18/2025, 3:29 PM	PDF	Preparing	⋮	
Medical Device UDI - GS1.btw 6/20/2025, 3:36 PM	PDF	Completed	⋮	
SCACTIL 7.btw 6/20/2025, 3:23 PM	PDF	Completed	⋮	

From this list you can reprint a print job or open the Print History page.

Recent Files

The Recent Files section of the Home page displays thumbnails of the six most recently printed files, the name of each file, and the date and time the file was last printed. The most recent file is positioned in the top left part of the panel, while the oldest displayed file is in the bottom right.

[Edit](#)

From this panel you can print one of the displayed documents, open the document in Librarian, open the document in Designer, or open the Librarian page. Clicking the thumbnail for one of these documents opens the document in the Print page.

When the Home page is reduced to tablet or mobile size, the longer names in the Recently Printed and Recent Files panels are not truncated ("...") with a popup that displays the complete name; instead, the full name is displayed and wrapped.

Enhanced RFID Field Visibility

BarTender Cloud now includes a visual indicator in the Template Library to identify templates for which RFID is in use. In the Template Library, the RFID indicator displays in the upper-right corner of the panel for the template that uses RFID.

If the thumbnail for the template document is large, this indicator displays over some or all of the thumbnail.

When creating or modifying a label based on a template, the indicator is also present to distinguish between RFID fields and standard data fields.

PurchaseInitial Purchase Initial	Value NS
AssetRFIDNumber Asset RFID Number	Value 392012321123433200

The Template Assistant also display an icon on each Setup page when RFID fields are present.

Expanded Error Reporting

Seagull has made changes to error messages displayed when multiple records are printed via the DataBaseOverride method. These messages have been enhanced to include additional information about the errors in the print run, including identifying the records within the print job that failed.

Error messages connected to the DataBaseOverride method can include any or all of the fields above, depending on the information in the database entry.

Print Engine Modified

Updates to the print engine deliver the following improvements:

- Increased reliability when recovering interrupted print jobs
- Enhanced visibility into database performance during printing
- Ability to disable PDF generation in print history for streamlined processing
