About BarTender 11.8

With BarTender® software by Seagull Software, organizations around the world can improve safety, security, efficiency, and compliance by creating and automating the printing of labels, barcodes, RFID tags, plastic cards, and more. Thousands of companies in manufacturing, chemicals, health care, food and beverage, aerospace, pharmaceuticals, supply chain/logistics, and other industries trust BarTender with the labeling and marking processes that keep their businesses running.

With the release of BarTender 11.8, Seagull Software continues to enhance your design and printing experience and provide easier ways to manage and administer your print operations. This document describes the most significant features that were added or improved in BarTender 11.8.
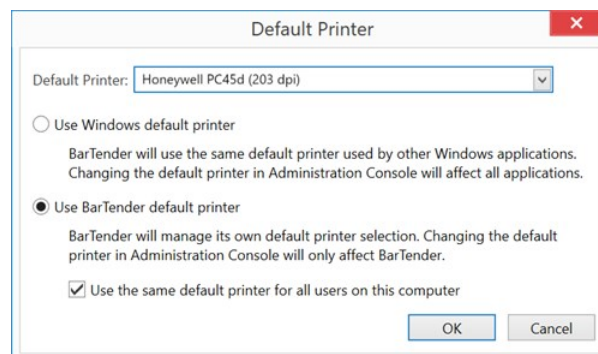

Printer Groups in the Printer Dropdown

BarTender Print Portal and Print Station now group your printers in the **Printer** dropdown on the Print page to make it easier to find and use the printer you want. Printers are sorted into one of four categories to make it easier to locate the printer you want: Favorited Printers, PDF, Local Printers, and Network Printers.

If there are no printers available for a group—for example, if you do not have any local printers installed or don't have permission to use network printers—that group does not appear on the **Printers** dropdown.

Set a Default Printer

An administrator can define a default printer for the current server using the Print Setup tab on the BarTender Administration Console.

1. On the Printer Setup tab, click the **Default Printer** button.

2. In the Default Printer dialog, select **Use BarTender default printer**.

3. In the **Default Printer** dropdown, select the printer to use as the default.

4. Select the **Use the same default printer for all users on this computer** checkbox to make this printer the default for all users on the current computer.

The printer specified here will display in the Favorited Printers section of the Printer dropdown in Print Portal and Print Station.
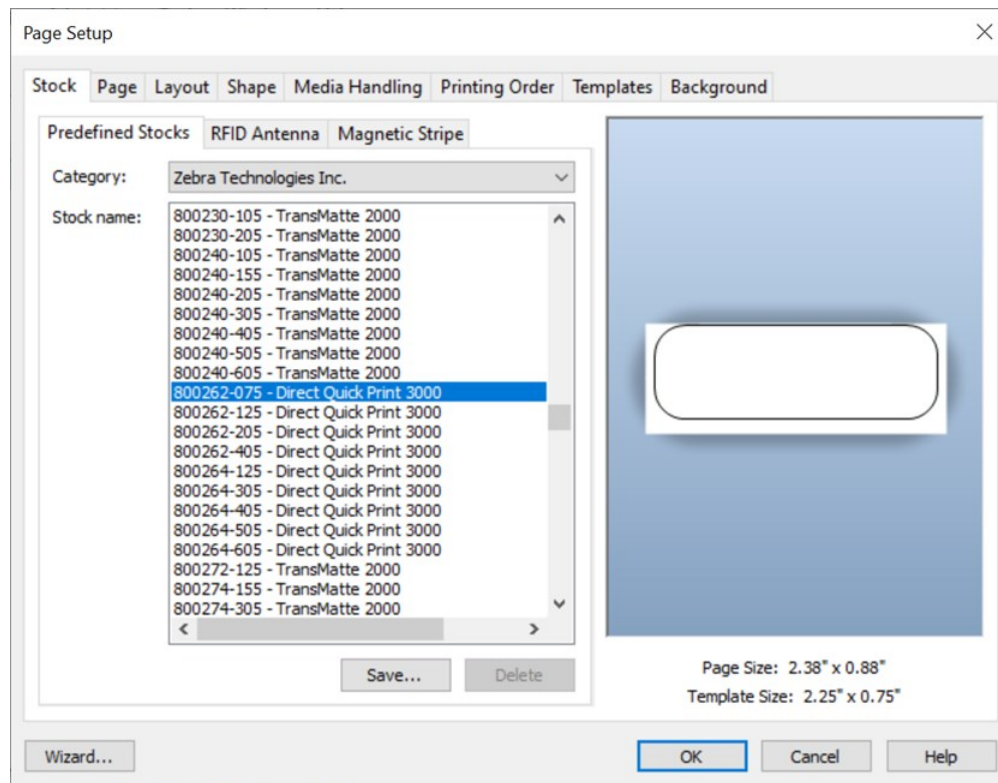

Automatic Grace Period for Expiring Subscriptions

BarTender now automatically grants to all versions of BarTender from 2019 on a 15-day grace period after a subscription has expired, minimizing the chance of downtime due to a subscription lapse.

New Media Stock Added

New Zebra Technologies media stock has been added to BarTender's listing and any discontinued stock removed. When creating a new document, the new Zebra stock can be accessed in the New Document Wizard.

The new stock is also accessible in Page Setup, where the user can customize the template to fit their existing stock if necessary.

Seagull Logos v1.1 Font Updated

The Seagull Logos v1.1 font now includes two new symbols: the EPC icon and the RFID icon .

End User Licence Agreement Updated

BarTender's End User License Agreement has moved to an online-only repository and must be agreed to before BarTender can be installed. You can access this new page from a link in the installer, or from the End User License Agreement topic in BarTender help.
